

YOUR PLAN

See the Leak

The loss isn't one dropped message. It's a pattern nobody has measured yet.

THE STAKES

At **\$[deals_per_month]+ deals/mo**, a 10% response leak is **\$[rough_calc]/month** you can't see. That pattern is worth real money every month.

YOUR 3 MOVES

- 1. **Build the tracker.** Lead source, time received, time responded, response gap, closed? Log it for one week.
- 2. **Triage.** High-intent (asked about pricing/booking) → fastest responder on the team. General inquiry → next in rotation.
- 3. **Measure the leak weekly.** Find which channel or person is slowest, then close it.

YOUR EXERCISE

Log one week. The slowest row is where the money goes.

Lead source	Response gap	Closed?

SET IT UP ON YOUR IPHONE

Settings › General › Keyboard › Text Replacement › tap +

Type the **Shortcut** field, and your phone fills in the **Phrase** — route the leak without fumbling.

Type	It sends (phrase)
------	-------------------

;log	[name] reached out about [topic] at [time]. High intent (asked about pricing). I replied at [time]. Flag if slower than [2h].
;hi	Thanks [name] — this looks like one to move on. Putting you with [person], our fastest. You'll hear from us shortly. — Udo
;gen	Good to hear from you. General inquiry over here — routing you to [person], you'll get a full answer shortly.
;cover	Escalate: [name] has been quiet since [time] on [topic]. Nights/weekends gap — cover now.

These are starting points — of course you can change them to what you need. Make them yours.

Want a live 15-min look at your real inbox — see the leak in your actual data? No pitch. Just reply to this email.
